# FERROUS Siberian larch cladding

---

The Woodmood Ferrous product line offers cladding boards made of Siberian larch that are extremely durable and weather resistant for outdoor use. The wood has been tinted with a mixture of ferrous sulphate and pigment, instantly giving it a weathered grey tone and protecting it against the effects of bacteria and fungi. This special treatment

leaves a naturally weathered and organic surface, with the colour shade Old Look. Due to the exceptional density of its wood, Siberian larch is very durable in moist or wet northern climates. The rhombic profile is also suitable for various frames and buildings meant for your garden.

---

We recommend Ferrous cladding boards for exterior use.

---

After finishing treatment, Siberian larch cladding is weatherproof and maintenance-free. Siberian larch is the strongest of all conifer species.

---

The product is easy to install and already finished; it does not require any treating or additional protection for outdoor use. The greyish tone is achieved during production.

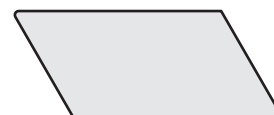

---

Environmentally friendly material.

---

- Species: Siberian larch
- Covered area (useful): 2.24 m<sup>2</sup> (6 pcs) per package
- Surface treatment: sawn surface, finished using ferrous sulphate
- Colour: Old Look
- Profile: ROMB/S
- Dimensions: 28 × 70 mm
- Cover width: 70 mm
- Length: 4000 mm (net length: 4000 mm)
- Package dimensions: 224 × 70 × 4000 mm
